Airmen decontaminate an asset that was contaminated during the simulated attack using their M-295 kits during the chemical, biological, radiological, nuclear and explosive training course at Eglin Air Force Base, Fla. The eight-hour course combines computer based and hands-on training on how and when to wear the gear, unexploded ordnances and protective measures. The 96th Civil Engineer Squadron's emergency

M295 Kit NSN 6850-01-357-8456

Easy equipment decontamination

The M295 Decontamination Kit provides decontamination of individual equipment (protective gloves, mask, hood, NBC overboots, helmet, load carrying equipment, and weapons) through physical removal and absorption of liquid chemical agents with no long term harmful side effects to the user. Each kit is enough to decontaminate two complete individual equipment operations and precludes agent transfer during gear exchange and entry/exit procedures.

What's in the kit

The M295 kit contains 4 decontamination mitts that fit over the hand. Each wipe-down mitt is sealed in a soft-pack pouch and is filled with an Alumina-based sorbent. The mitts are then sealed within a waterproof protective package. In use, powder from the mitt is allowed to flow freely through the pad material. Decontamination is accomplished through sorption of contamination by both the pad and the decontaminating powder.

How to use

Use the first mitt to decontaminate your gloves, the exposed areas of your mask and hood, your weapon, and your helmet. Use the second mitt to decontaminate your accessories, LCE, mask carrier, overboots and your gloves again. M295 mitts can reduce the amount of agent that is touched and minimizes agent penetration into surfaces of individual equipment. Since kit only removes liquid hazards, decontaminated items may still present a vapor hazard. Remember, don't unmask until operational conditions permit and has been determined safe to do so.

No hassle shipping

Shipping is via **UPS Ground**. No HAZMAT packaging or labeling required.

Volume friendly pricing

Shelf-life up to 5 years

The M295 Kit is an ITAR-export controlled item and requires an export license prior to shipment to non-United States entities, and/or delivery to any foreign persons. The M295 Kit is controlled by United States International Traffic in Arms Regulations (ITAR, 22CFR 120-130). It is the responsibility of each individual in control of this item to abide by all U.S. and International export laws.
