A Hot Meal Anytime, Anyplace™

Self-Heating Meals that Sustain and Nourish

Our unique, patented, flameless food heater has heated over 1 BILLION meals since 1990. After your meal has been inserted into the bag, simply pour the included activator solution over the heater, tape it closed and re-insert into the box. Our incredible technology will produce heat and steam which will provide you with a piping hot meal in minutes!! Once finished with your delicious meal, all contents including the heater can be thrown away.

Here's Why HeaterMeals Are Ready-To-Eat...

Traditional canning has come a long way! All entrees used in HeaterMeals products undergo thermal processing in a state-of-the-art retort machine. This process eliminates microbial organisms that can cause food spoilage, resulting in flavorful meals that are safe to store without refrigeration or freezing for the entire shelf life of the product. There's also no need to use preservatives to seal in flavor or nutrition with the retort process.
